PROBLEM STATEMENT

Decentralized grant and bounty platforms face several challenges today

Low ROI

Too many projects don't deliver the expected returns on grants.

Disconnected Ecosystem

Builders, funders, and communities don't collaborate effectively, leaving important voices unheard.

Unclear Objectives

Many projects lack clear goals, making it hard to track progress.

Barriers for Newcomers

There's no clear path for newcomers to join the ecosystem and contribute meaningfully.

Bad decision-making

Funding decisions are often made by people without the right expertise.

MISSION

To create a decentralized platform where builders, funders, and the community can come together to fund and build **projects that create real, measurable impact**—while empowering newcomers to join and grow.

Create the leading platform for decentralized projects, with clear objectives, transparent decision-making, and strong collaboration

SOLUTIONS

What we are solving.

Higher ROI on Grants:

Align project goals with business objectives. Track results through clear deliverables to ensure better outcomes for funders.

Clear, Actionable Projects:

Well-defined goals and deliverables for projects, so everyone knows what success looks like.

Smart Fund Allocation

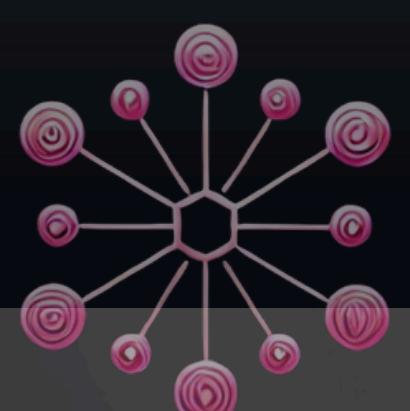

Funds are distributed based on milestones. Stake reputation to ensure the right people work on the right projects.

Onboarding New Talent

Newcomers are given an easy path to contribute through small tasks, helping them grow their skills and reputation.

Improved Collaboration

Our platform connects builders, funders, and the community to work together more efficiently, so every project serves the ecosystem's need.

03

CAPABILITIES

Strengthen collaboration
with these features

REPUTATION-
DRIVEN FUNDING

DECENTRALIZED
FUND
MANAGEMENT

OBJECTIVE-
ORIENTED
PROJECTS

COMMUNITY
INVOLVEMENT

1

2

3

4

Reputation scores recorded on-chain ensure only trusted builders get prioritized, making funding decisions transparent and fair.

Smart contracts release funds based on milestone completion, ensuring accountability and reducing risks.

Projects must have clear objectives and deliverables, allowing measurable progress tracking.

Projects can be reviewed by the community, giving everyone a voice in shaping the future of the ecosystem.

04

WHY SHOULD YOU USE OUR PLATFORM?

Because transparent, trusted collaboration turns investments into measurable success: seamless, fair, and open to all.

Smart investment

Funders know exactly where their money is going, and projects deliver measurable results.

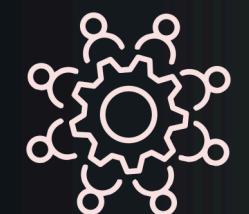

Transparency

Reputation-based decision-making ensures that only trusted, experienced builders take on high-stakes projects.

Open

An easy-to-follow path for new contributors means more talent in the ecosystem.

Collaboration

Builders, funders, and the community work together to make sure every project meets the ecosystem's needs.

ChainGuard Security

Penetration Testing of Layer 2 Solutions

DevOps Engineer, Ethical Hacker, Security Researcher

Apply

FinBlock Solutions

Cross-Chain Bridge Integration for DeFi Protocol

Smart Contract developer, Backend Developer

Apply

Description

Lido DAO is looking for an experienced Solidity developer to build a smart contract that integrates a CRM (Customer Relationship Management) system with our decentralized infrastructure. The contract will automate tasks such as customer onboarding, data storage, and secure access permissions for CRM-related workflows, ensuring full transparency and immutability on-chain.

Key requirements

- Develop a Solidity-based smart contract that interacts with CRM data securely.
- Ensure proper access control for different user roles (e.g., admin, customer).
- Enable data encryption for sensitive customer information stored on-chain.
- Implement a mechanism for customer interactions and data tracking within the CRM system.
- Ensure compatibility with Lido's existing infrastructure and smart contract standards.

Eligibility criteria

- Proven experience in Solidity smart contract development.
- Prior experience integrating smart contracts with off-chain systems is a plus.
- Familiarity with data security best practices and decentralized applications (dApps).
- Ability to submit work through a GitHub pull request and provide clear documentation.

Deliverables

- A fully functional smart contract integrated with the CRM system.
- Documentation outlining the contract's architecture, usage, and interaction with the CRM.
- A demo or testnet deployment showing the contract's functionalities.

Reward

4 ETH upon successful completion and approval by the Lido DAO development team.

Deadline

December 1, 2024

Description
Conduct a comprehensive audit of Optimism Collective's financials to gain a detailed understanding of its current financial state. This audit will cover the DAO's assets, annual burn rate, expense allocation, and the value these expenses bring back to the DAO. The research will also provide insights necessary for future treasury diversification decisions. This mission ties into a broader initiative to enhance the Optimism Treasury. Understanding the current financial landscape is essential before making recommendations regarding Optimism's treasury and strategies to attract more developers to the Superchain.

Key requirements

- Audit the DAO's trailing 12-month revenues and expenses.
- Provide forecasts for the next 12 months.
- Analyze the DAO's assets, liabilities, and cash flows.
- Assess the impact of OP sell pressure on the token price due to expenses.
- Review each expense and its value return, especially incentives and paid services.
- Work closely with members of Optimism Foundation and OP Labs.
- A detailed financial report covering all aspects outlined above.
- Frameworks for evaluating and optimizing future DAO expenses.
- Recommendations on how to adjust expenses to strengthen the DAO's treasury.

Eligibility criteria

- Financial auditing of DAOs or decentralized ecosystems.
- Strong analytical skills with a background in blockchain finance.
- Previous experience with high-profile DAOs (e.g., Arbitrum) is a plus.

Deliverables

- The success of this mission will be evaluated based on TVL growth, as the research aims to optimize the financial health of Optimism and increase its attractiveness to developers.

Reward 20,000 OP
